

EVOLUCARE AND UMAMI SIGN A STRATEGIC PARTNERSHIP TO PROMOTE OPHTAI IN THE GERMAN MARKET

Le Pecq, 11 January 2022,

Evolucare and Umami-Ware are proud to announce their partnership to promote the OphtAI solution in Germany. Integrated with the Umami-View solution, a new generation ERP dedicated to the optometrists and opticians, OphtAI completes a high value-added offer for patient care.

Through its partnership with Umami-Ware, Evolucare brings its OphtAI solution closer to the patient. The integration of its API into the Umami-View ERP allows eye professionals in optical centers detecting suspected cases of eye-related pathologies. Patients can then be quickly referred to an ophthalmologist for a faster treatment.

Umami-View is a disruptive SaaS-based ERP dedicated to eye care professionals in Germany. Its value proposition is based on providing customers with a digital solution that allows them to manage their consultation files, diary, invoicing and accounting in full "paperless" mode. OphtAI completes the offer and reinforces the clinical aspect of the application. For its customers, it is an opportunity to offer value-added services to their patients, comments François Potevin, International Director of the Evolucare Group.

"Our ecosystem of partners has another new addition in Evolucare and their AI-powered fundus assessment OpthAI, which takes the customer experience at the optician to a new level. Offering to detect a risk analysis in seconds regarding fundus changes will speed up and improve the health care experience. It will help many people out there and provide authorized opticians with real added value, perfectly and seamlessly integrated into our system." adds Johannes, co-founder and business leader of Umami-Ware.
